FEMA Region 6 Weather Threat Briefing

Sunday, June 17, 2018

Disclaimer: The purpose of this briefing is to provide a <u>Regional</u> weather threat assessment and is meant as a general overview. County/Parish decision makers should consult their local NWS forecast offices for the latest detailed, local weather information. To find your local NWS forecast office, go to <u>www.weather.gov/srh</u>.

Key Points

Today

- Isolated heavy rain/flash flooding remains possible over WTX this morning.
- Some isolated heavy rain is possible along the TX Coast into the SW and Central LA Coast late tonight into Monday morning.

Monday

Isolated heavy rain/flash flooding possible along TX Coast.

Tuesday - Thursday

Areas of heavy rain/flash flooding remain possible from STX through the Central TX Coast.

Tropical Outlook

- The combination of a surface trough and an upper level low pressure system is producing a large but disorganized area of showers and thunderstorms over the W-Central Gulf of Mexico. This system is producing strong gusty winds over the N & NW Gulf. Environmental conditions do not support significant development, however, heavy rains and gusty winds are likely to continue across the NW Gulf of Mexico today. This activity will reach portions of the TX and SW LA coasts later today.
 - Formation chance through 48 hours...low...20%.
 - Formation chance through 5 days...low...20%.

FEMA Region 6 Threat Matrix

SR ROC
REGIONAL OPERATIONS CENTER

June 17 2018 - June 21, 2018

DAY /THREAT	SUN	MON	TUE	WED	THU
Severe Storms					
Heavy Rain / Flash Flooding	AM-WTX		STX, Central TX Coast	STX, Central TX Coast	STX, Central TX Coast
	Later - TX Coast, SW & Central LA Coast	TX Coast			
Fire Weather					
Tropical Weather					
River Flooding		CoastalTX	STX Coast	STX	STX

*Threat levels are based on FEMA Region 6 criteria.

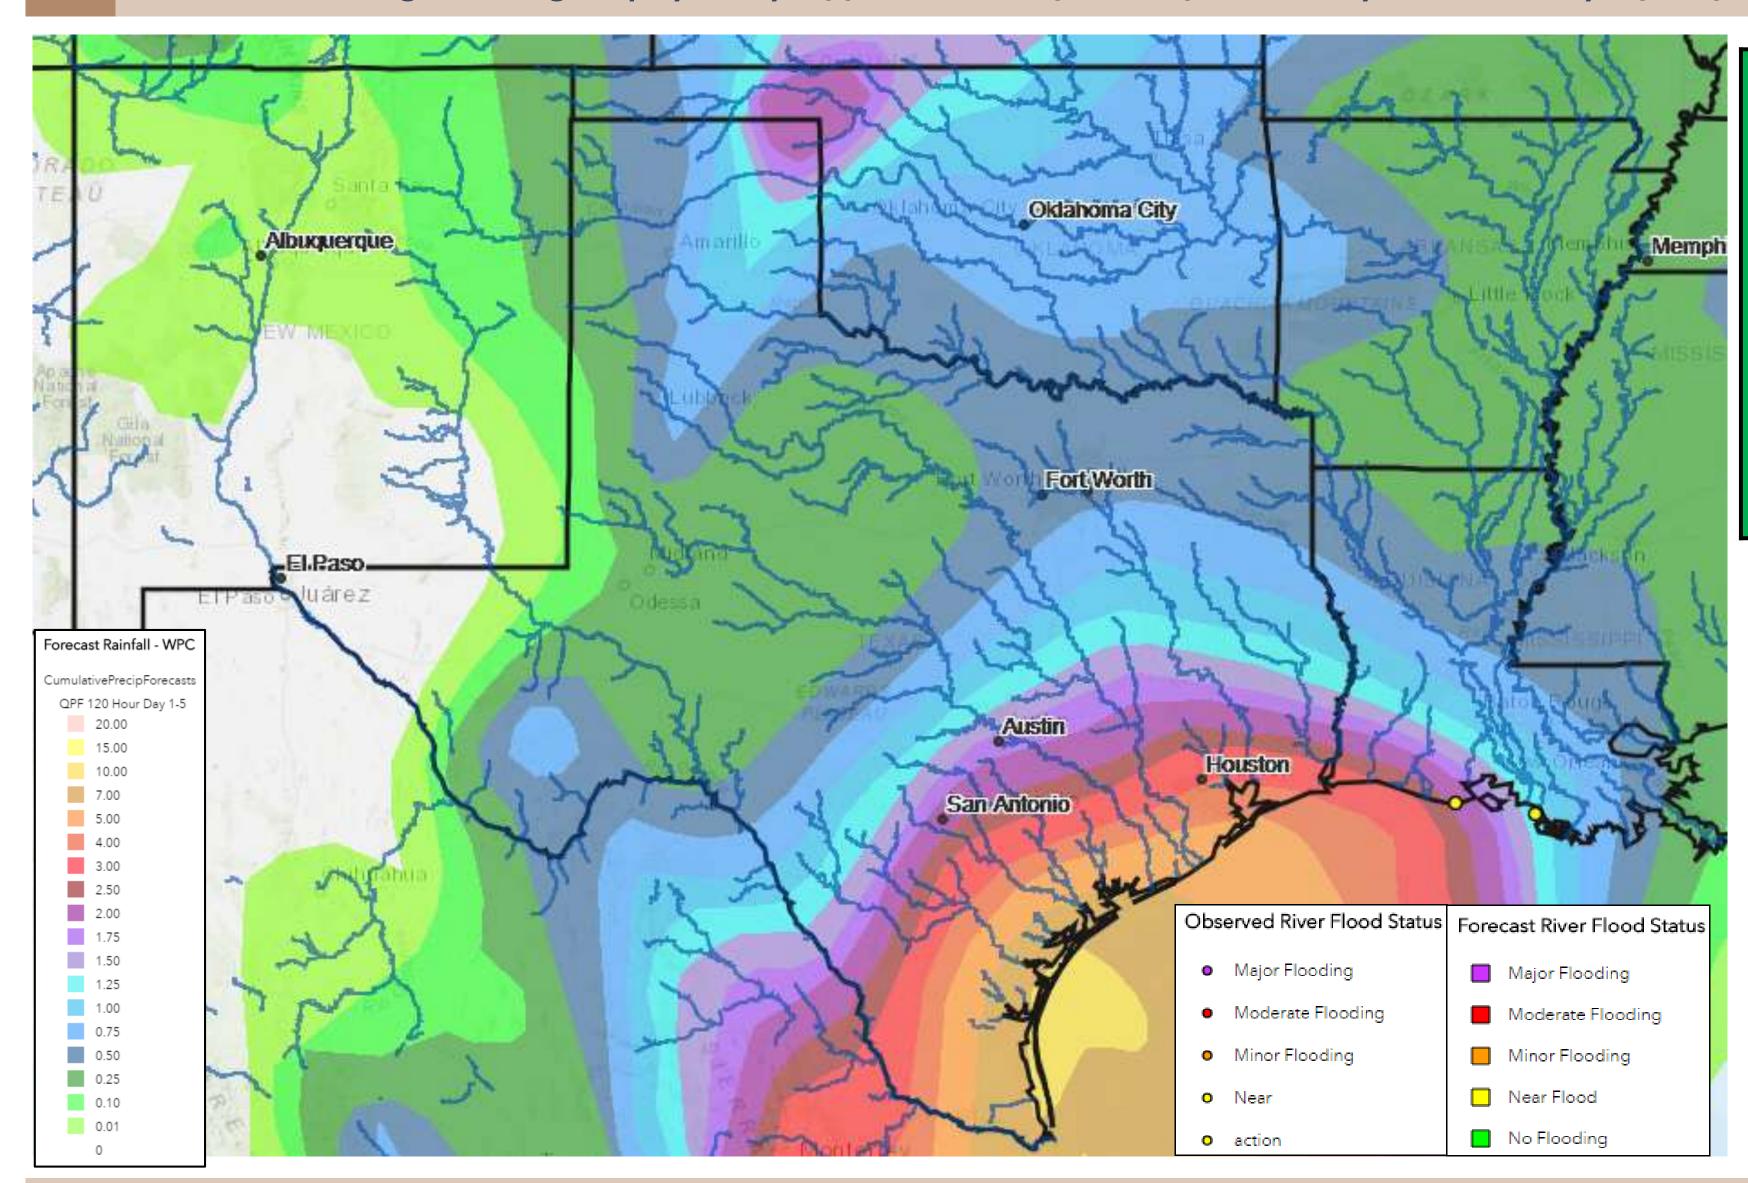

State or local threat level criteria may differ.*

For more details on the colors in the threat matrix refer to the last slide in this briefing.

5-Day Precipitation Forecast & River Flood Status

SR ROC
REGIONAL OPERATIONS CENTER

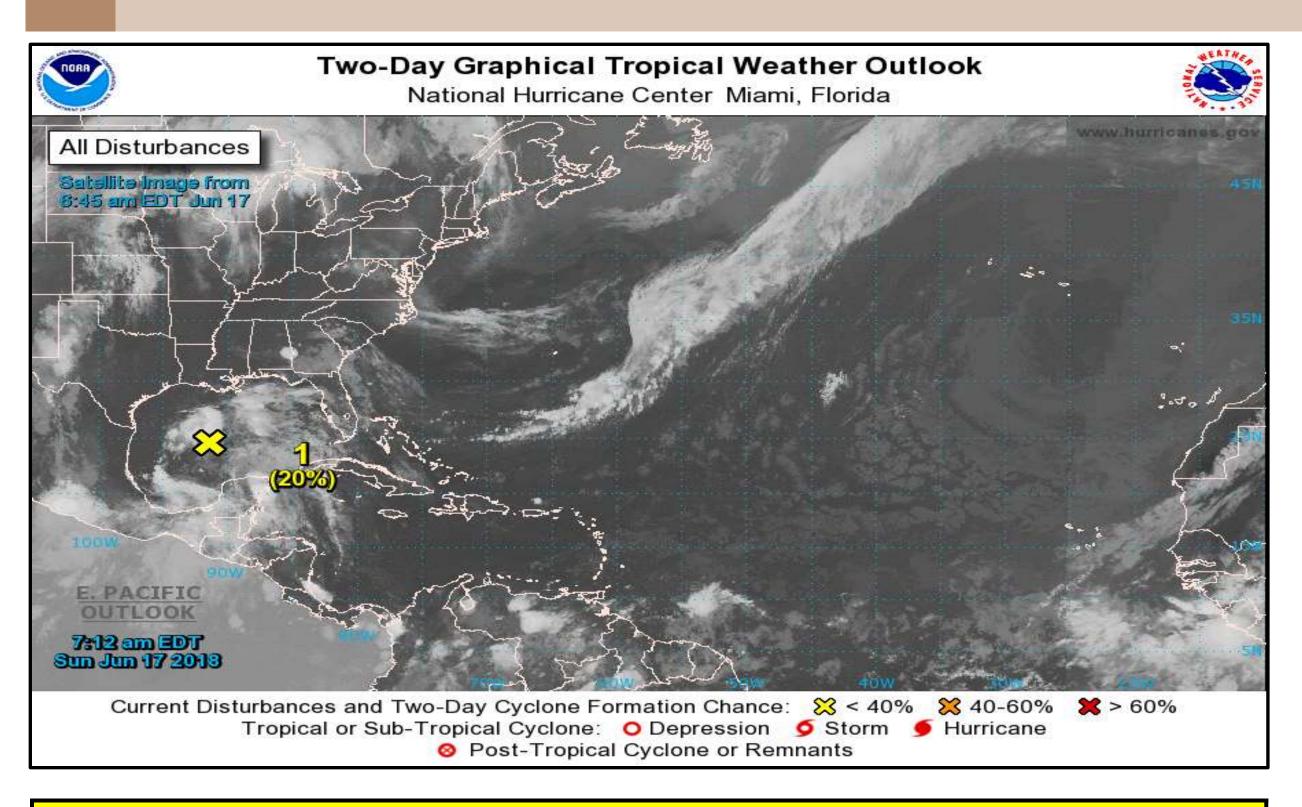

Note: Even though the image displays 5 days of forecasted rainfall, river forecasts only include 1-2 days of rainfall

With rainfall expected along the Texas coast today through at least mid-week and over STX through the end of the week, a few river points may rise into minor flood stage where heavy rain occurs.

Tropical Weather Outlook – Atlantic/Gulf

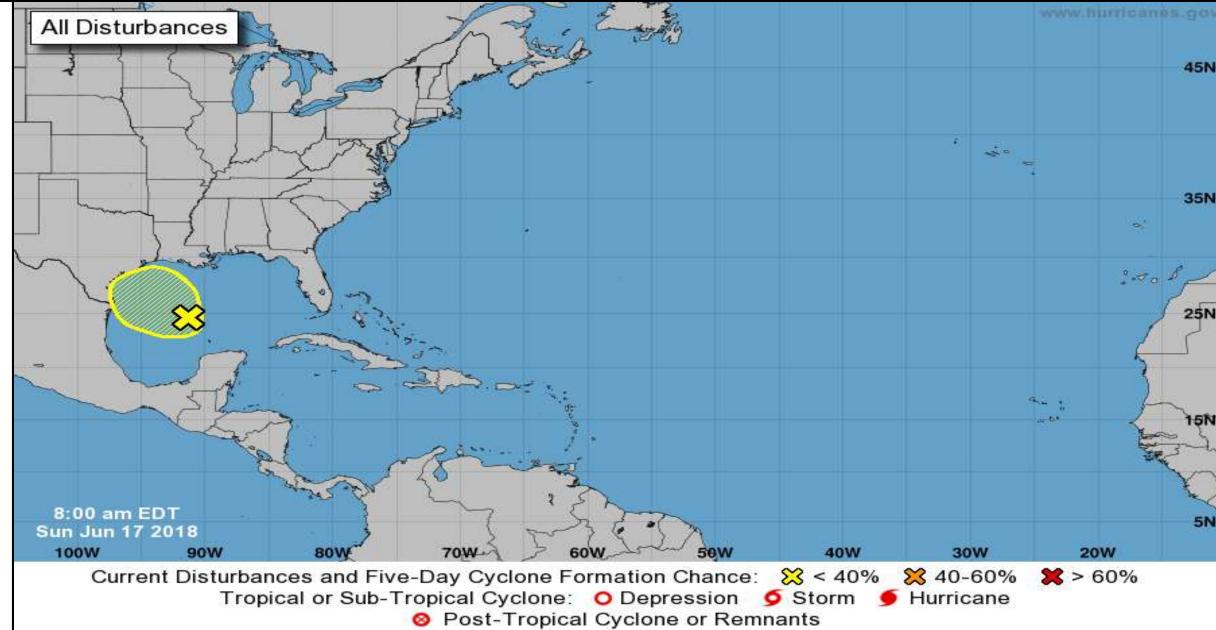

This system is expected to bring heavy rain to the Texas Coast and SW LA today through Tuesday.

The combination of a surface trough and an upper level low pressure system is producing a large but disorganized area of showers and thunderstorms over the west-central Gulf of Mexico. This system is producing strong gusty winds over the northern and northwestern Gulf. Environmental conditions do not support significant development, however, heavy rains and gusty winds are likely to continue across the NW Gulf of Mexico today. This activity will reach portions of the TX and SW LA coasts later today.

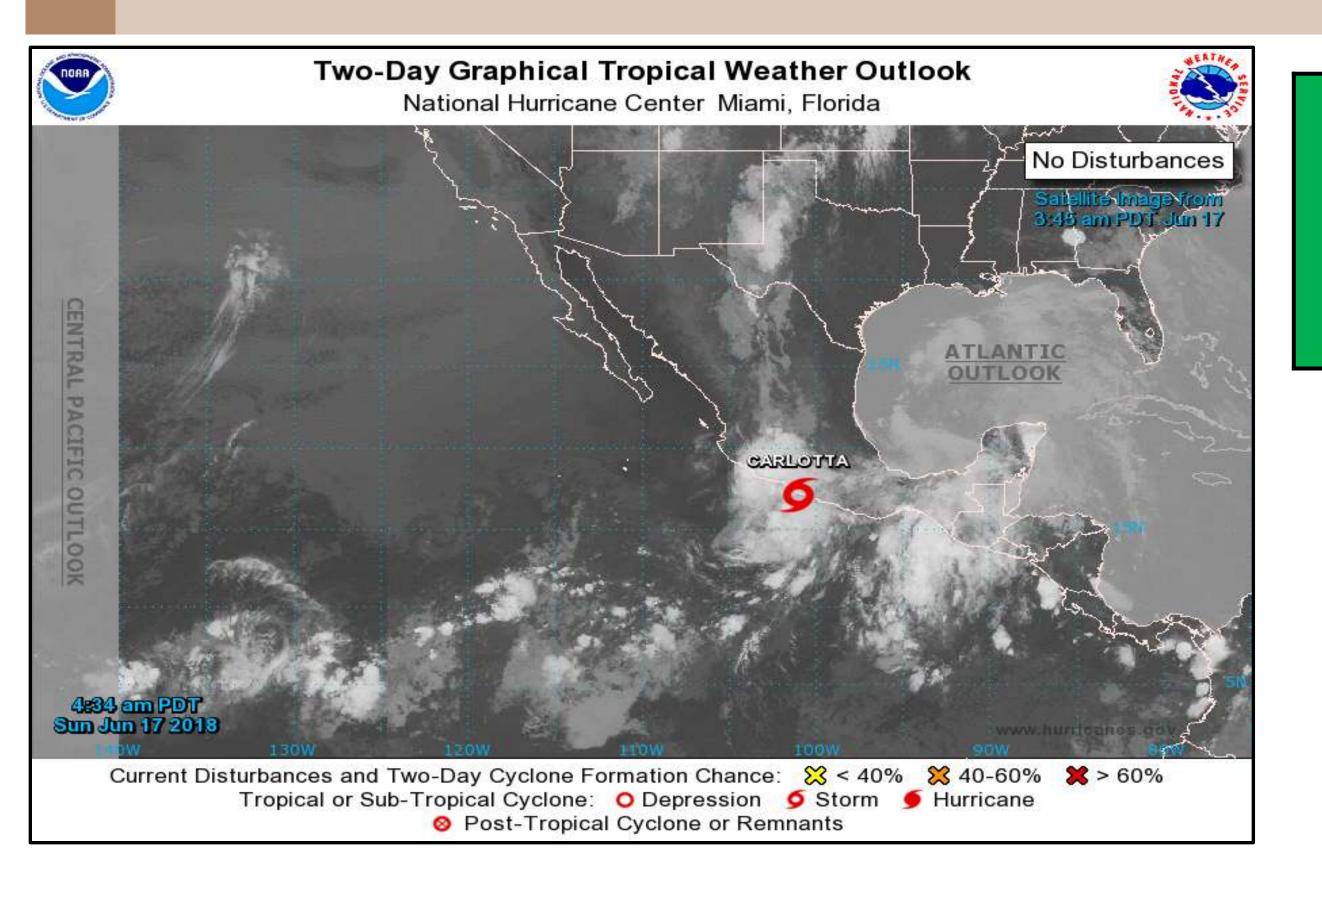

Formation chance through 48 hours...low...20%.

Formation chance through 5 days...low...20%.

Tropical Weather Outlook – Eastern Pacific

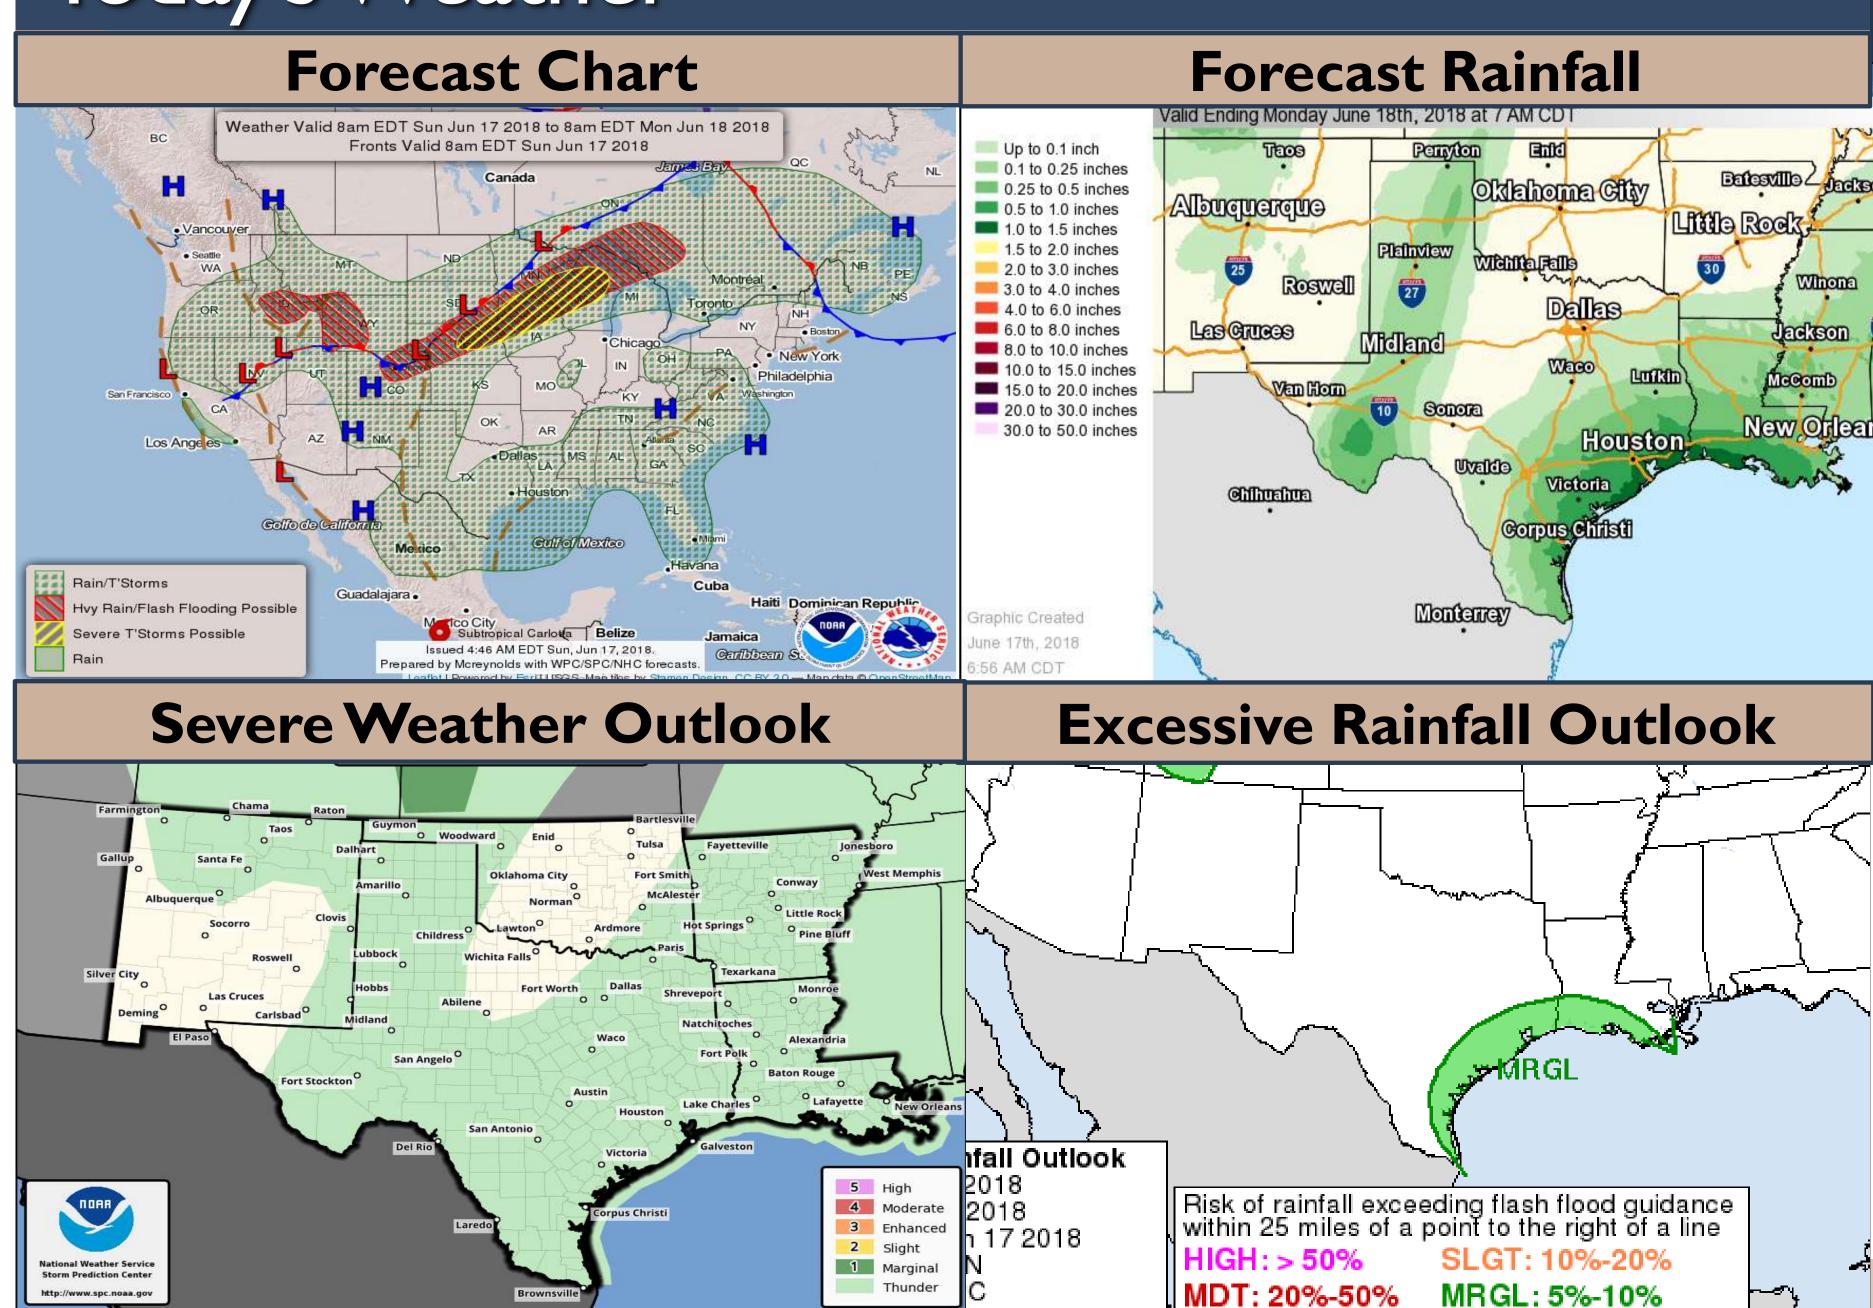

Tropical Storm Carlotta is expected to slowly move inland today and weaken.

Today's Weather

Isolated heavy rain/flash flooding remains possible over WTX this morning.

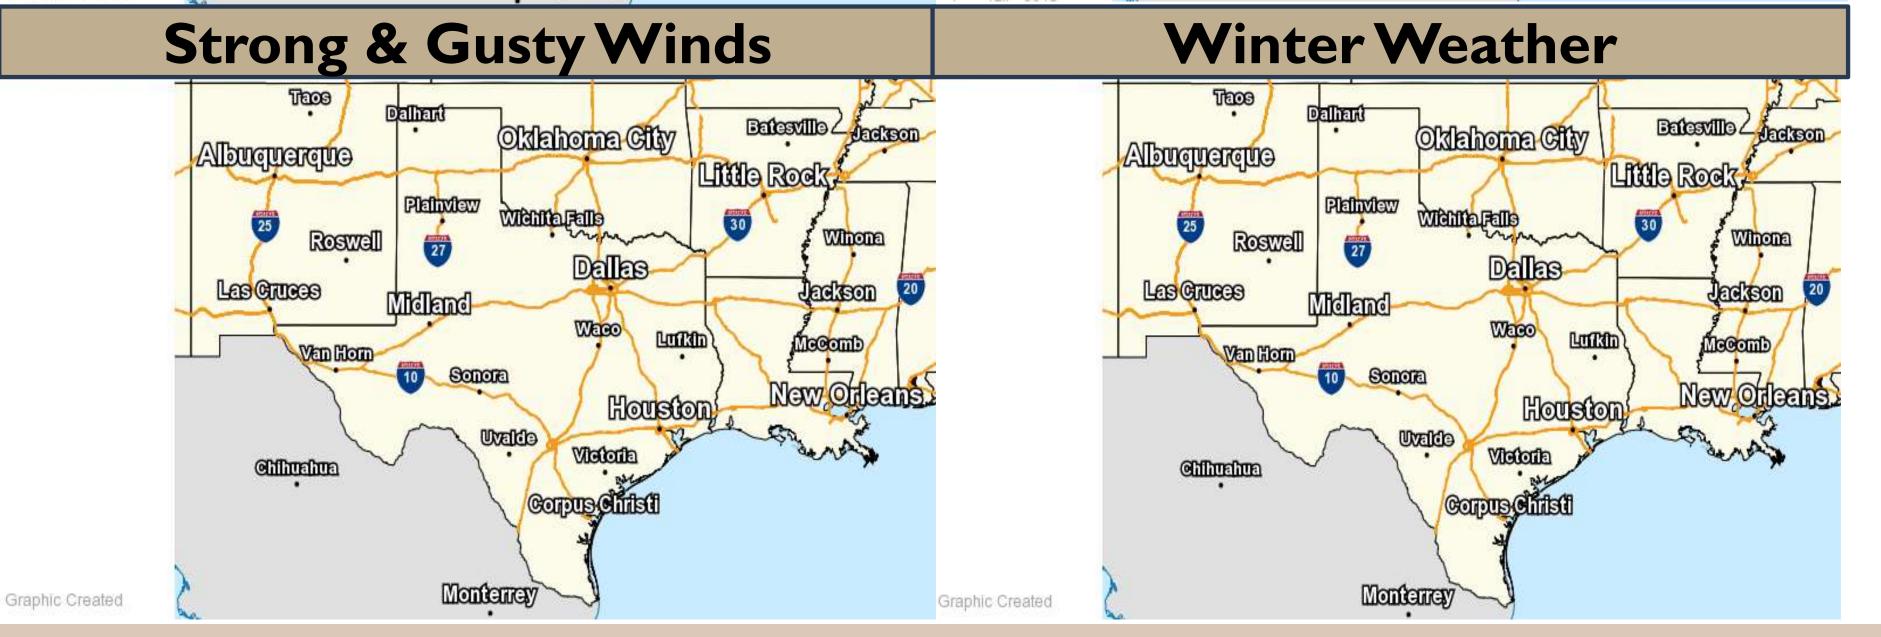

Some isolated heavy rain is possible along the TX Coast into the SW and Central LA Coast late tonight into Monday morning.

Watches, Warnings, and Advisories

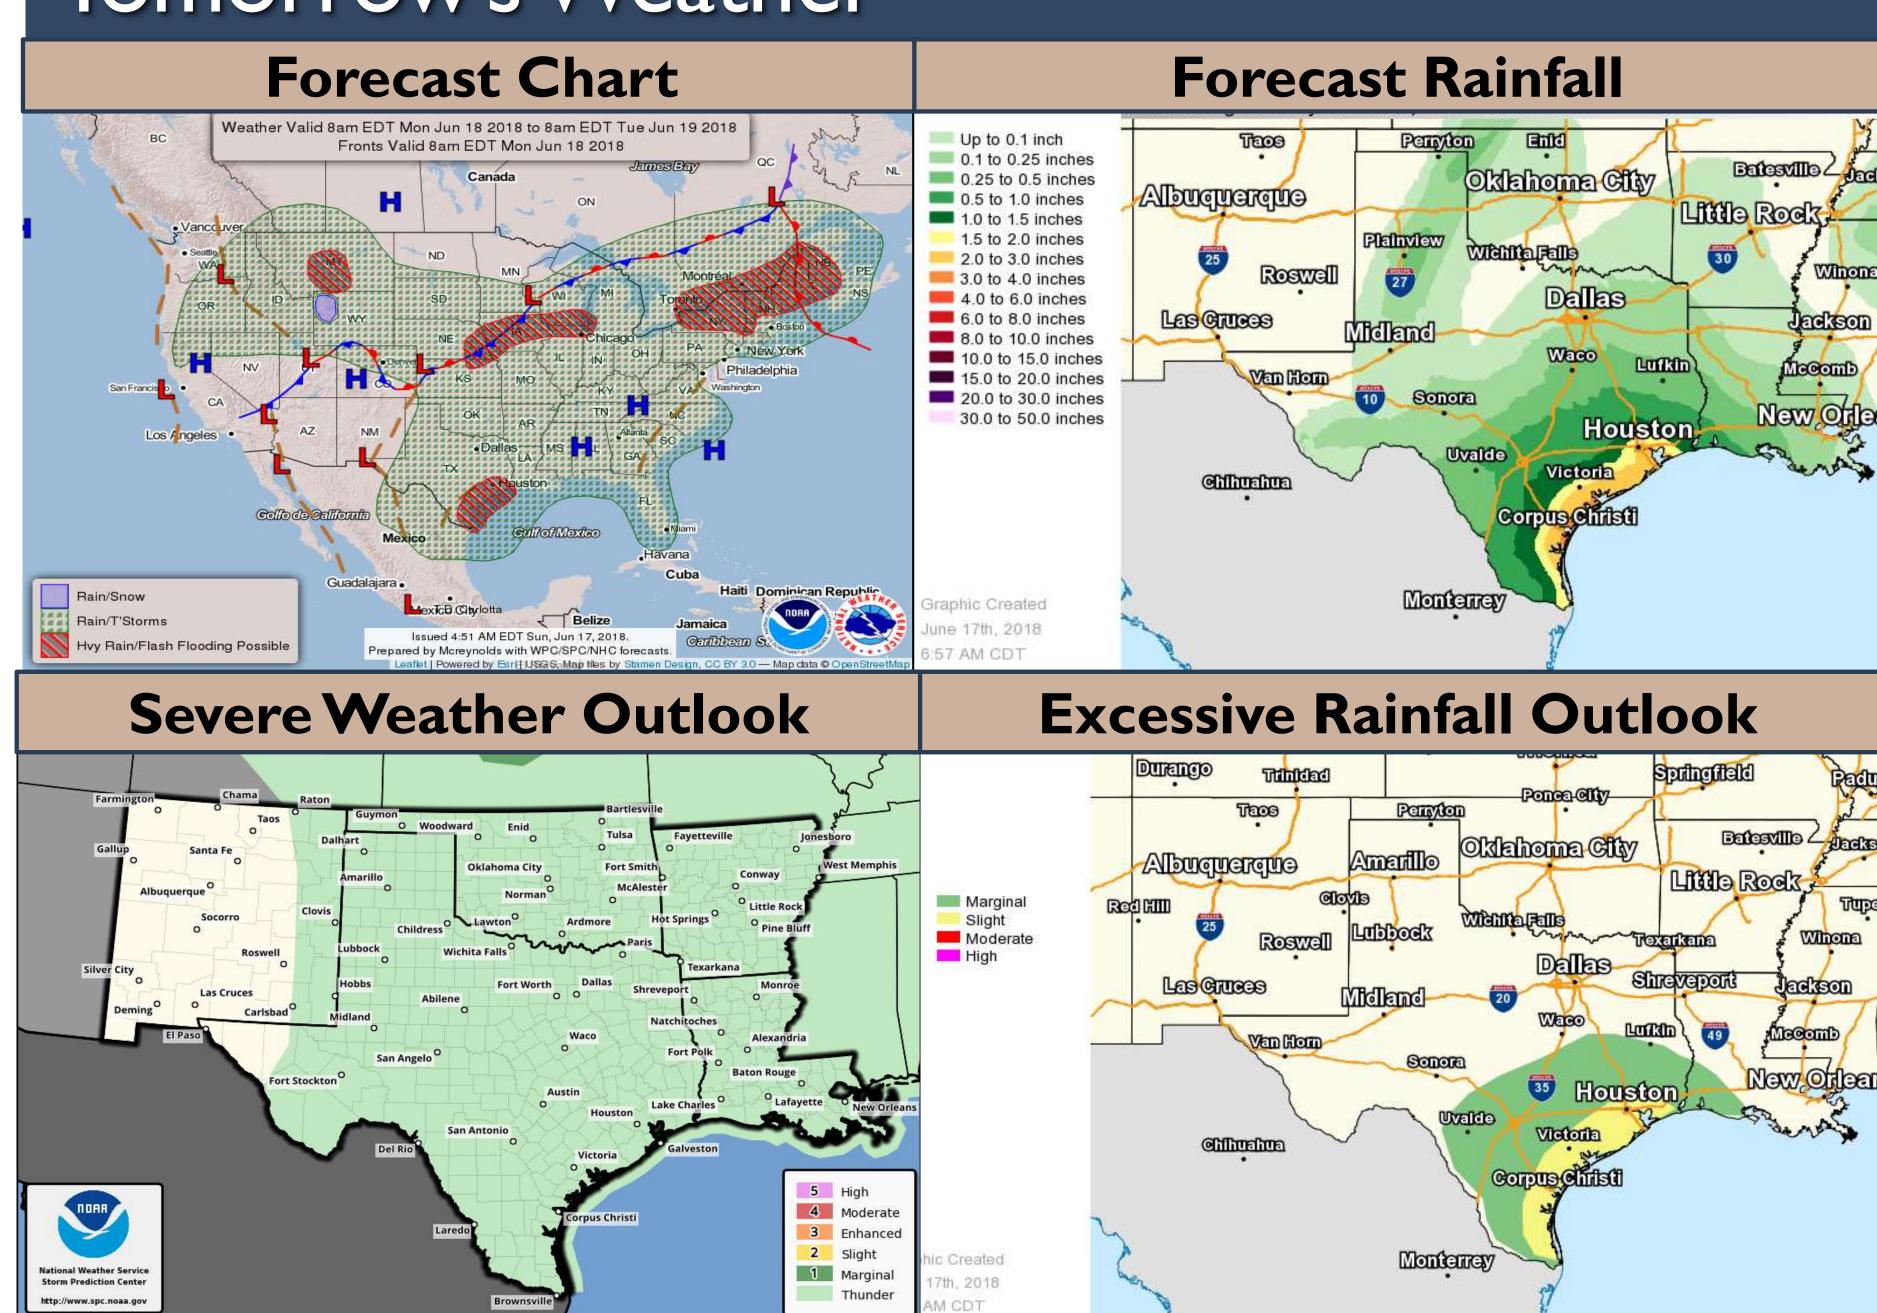

Flash Flood Watches remain in effect this morning over WTX.

6/17/2018 7:49 AM

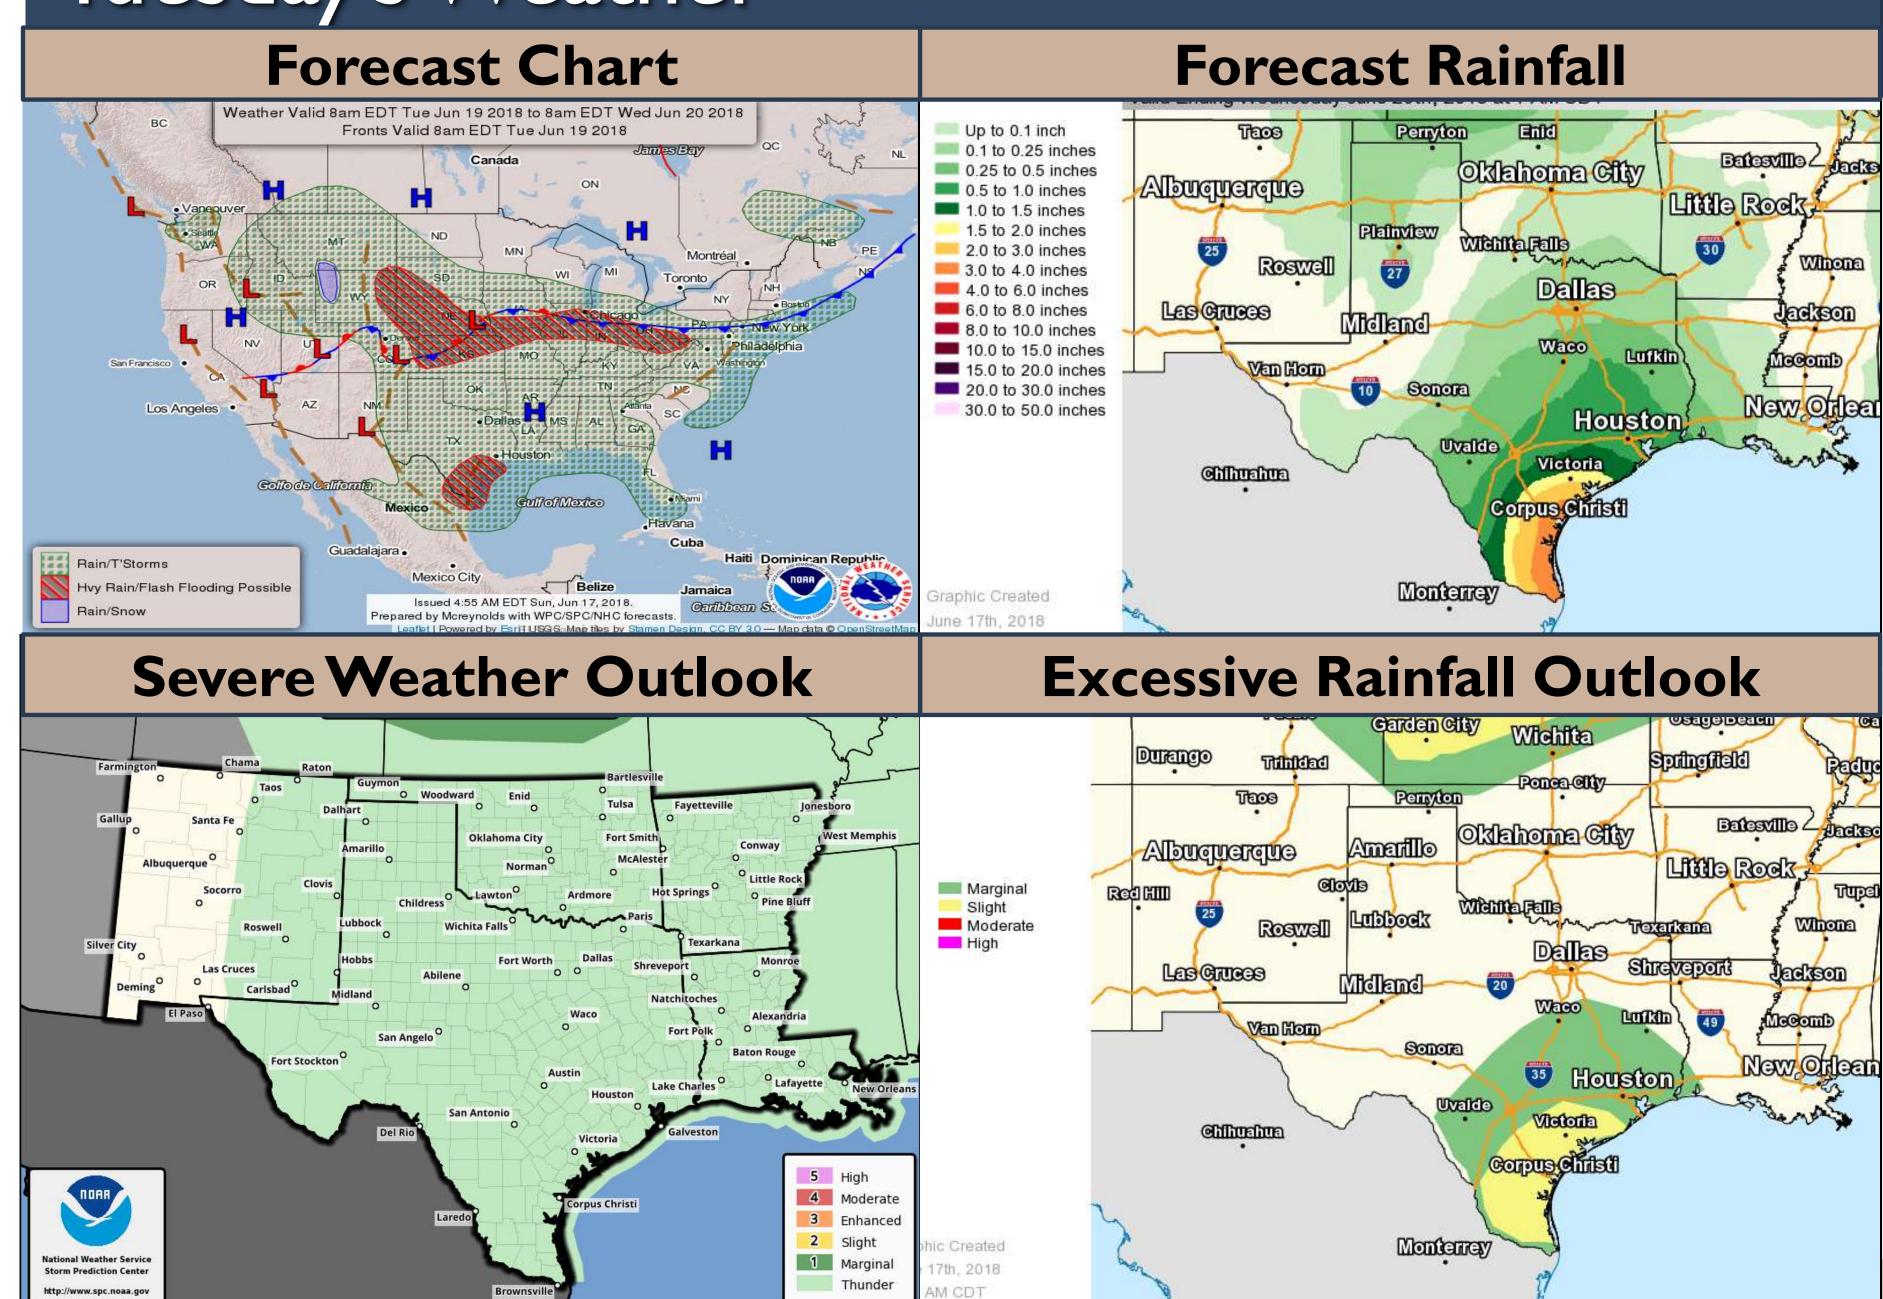

Tomorrow's Weather

Isolated heavy rain/flash flooding possible along the TX Coast.

Tuesday's Weather

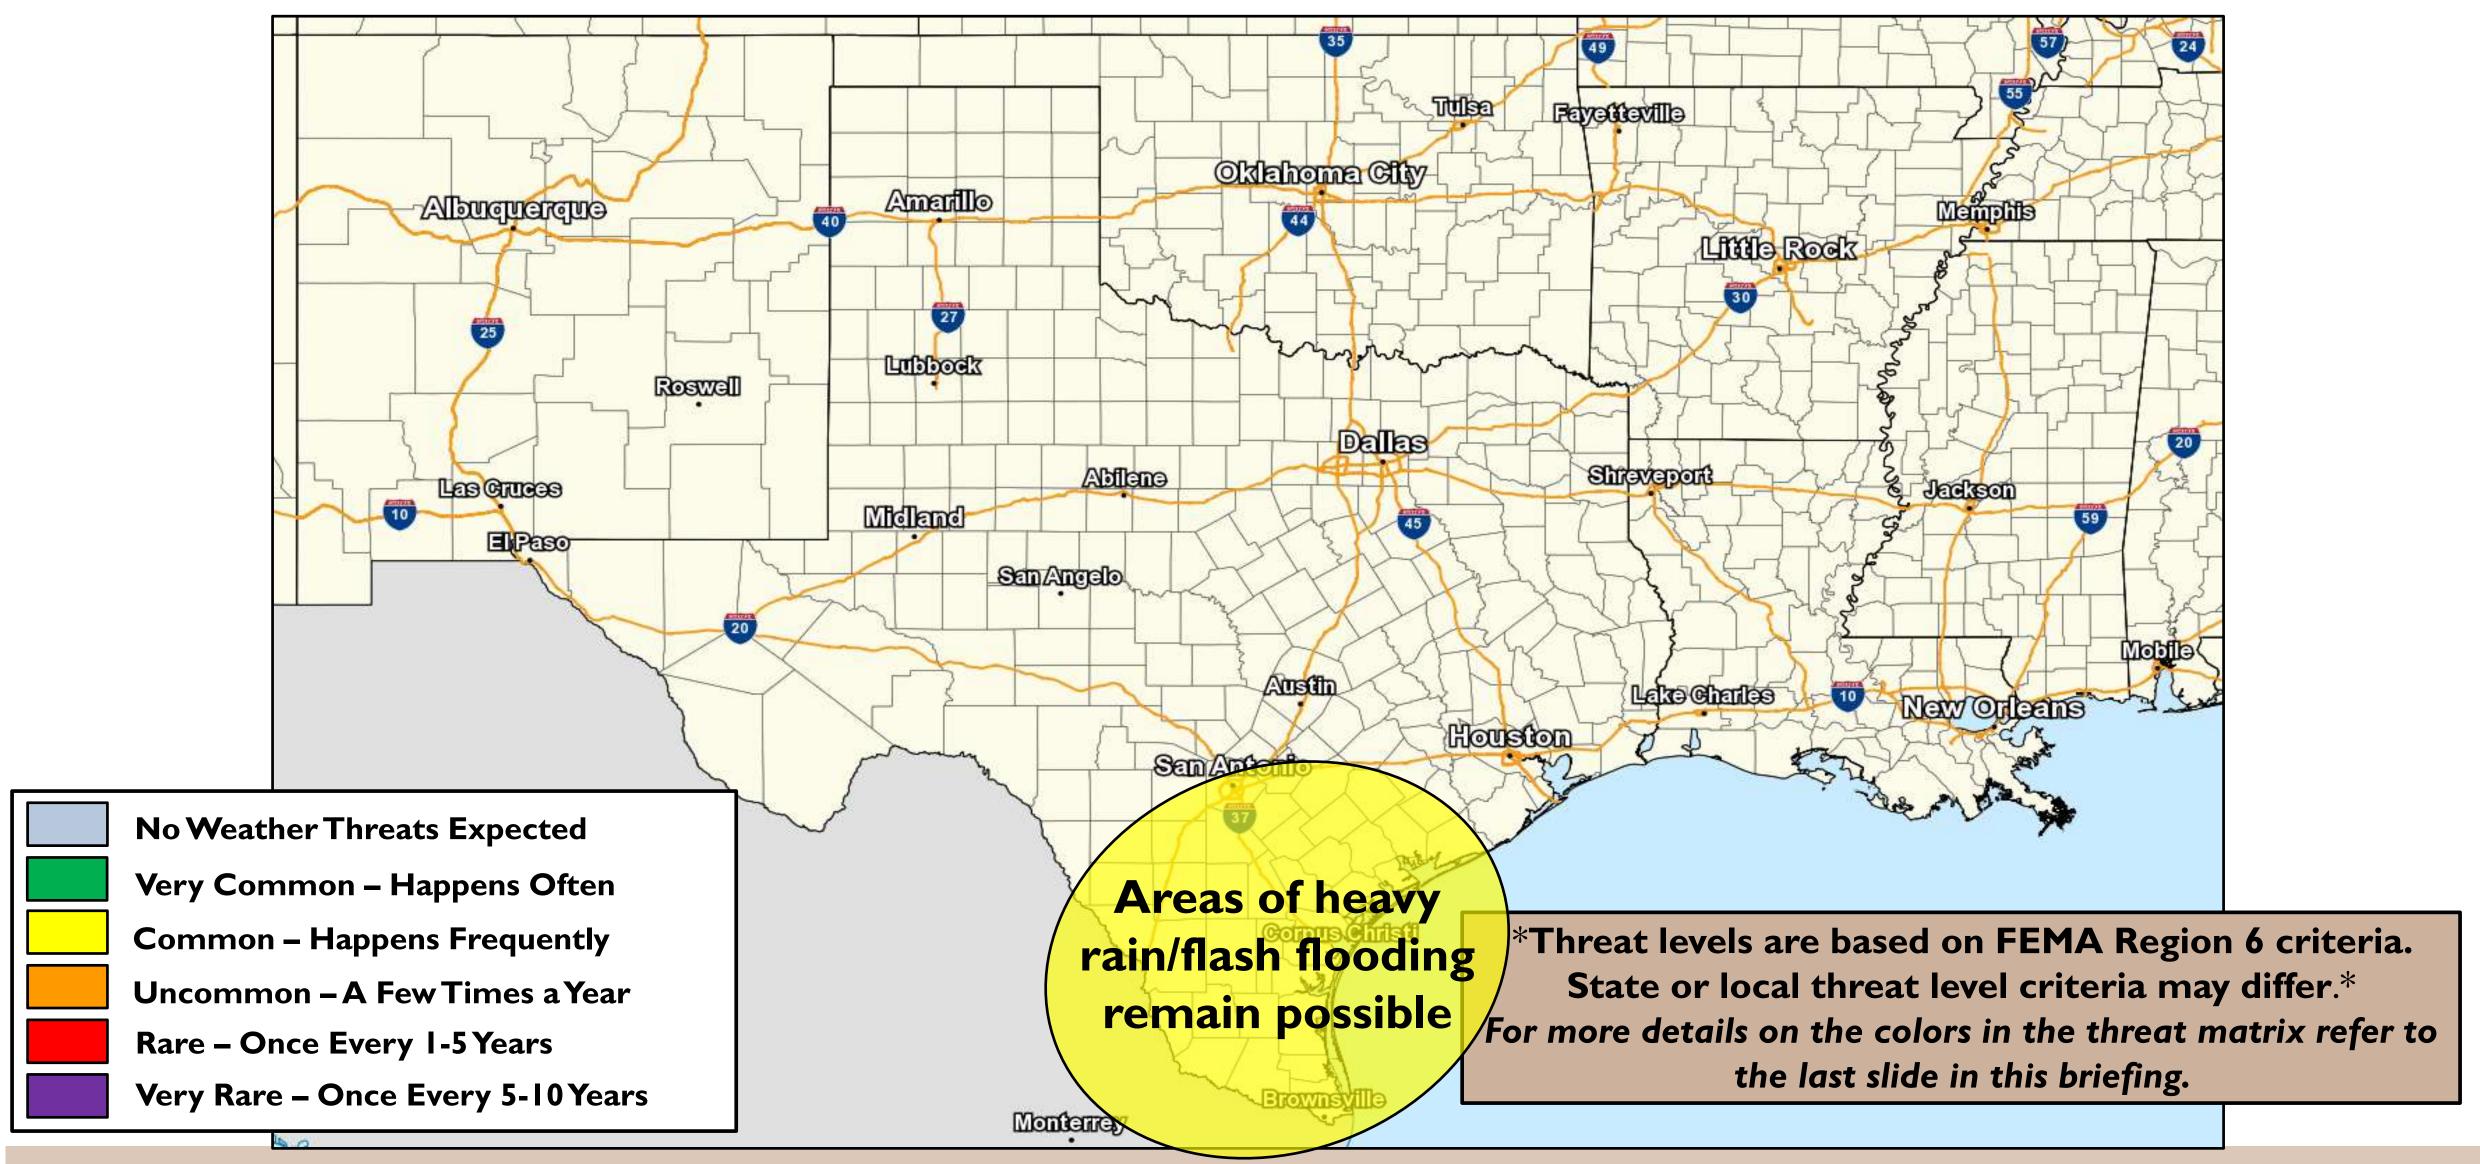

Isolated heavy rain/flash flooding remains possible over STX through the Central TX Coast.

Days 4-5 Weather Hazards

Wednesday - Thursday

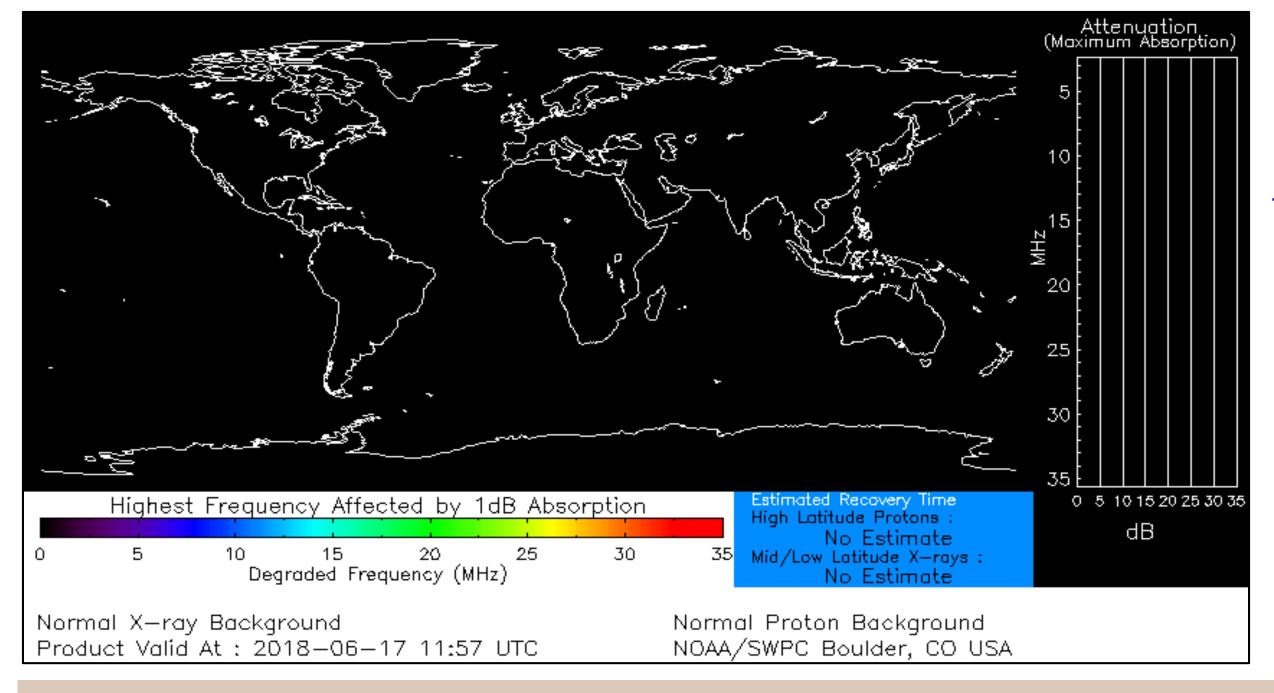

Space Weather 3-Day Forecast

	Sunday	Monday	Tuesday
Geomagnetic Storms	Quiet to Unsettled (Max Kp = 3)	Quiet to Unsettled (Max Kp = 3)	Quiet (Max Kp = 2)
Solar Radiation Storm (SI-S5)	1%	1%	1%
Radio Blackout (RI-R2)	1%	1%	1%

	Weather "Threat" Matrix							
Color	Definition	Criteria	Example(s)					
Green	Very Common Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Little Inconvenience to Daily Routines	Severe: Marginal Risk from SPC Flooding: Minor flooding expected over localized areas Tropical: None Fire Weather: No Watches/Warnings, fuel moisture above 10% or green up active	 Thunderstorms expected over LA this afternoon; a few may produce winds to knock down a few trees Something that happens almost every day in a particular season such as seabreeze storms in coastal TX 					
Yellow	Somewhat Common — Happens Frequently Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Some Inconvenience to Daily Life	Severe: Slight Risk from SPC Flooding: Nuisance flooded expected for a widespread area, or Minor flooding expected over isolated areas Tropical: A weak tropical wave expected to move towards or near any coastline Fire Weather: Red Flag Watches/Warnings and/or SPC outlines enhanced or critical fire outlook	 2-3 inches of rainfall expected over central AR today and tonight; some minor (brief) street flooding possible Scattered severe storms possible, one or two tornadoes expected, along with reports of strong winds/wind damage and ~1" hail 					
Orange	Uncommon — A Few Times a Year Safety: Often Threatening to Life and Property, Some Damage Unavoidable Impact Potential: Typically Results in Minor Disruption to Daily Life	Severe: Enhanced Risk from SPC Flooding: Minor flooding expected over a widespread area (including urban locations), or Moderate flooding expected over isolated areas Tropical: A Tropical Storm expected to move towards or near any coastline Fire: Critical fire outlook for more than 2 consecutive days, Warnings for 2 or more consecutive days, D3-D4 drought conditions	 A snow/sleet mix is expected to move through or near the DFW area tomorrow morning; travel impacts likely Numerous severe storms possible, a few tornadoes possible along with several reports of wind damage along with damaging hail Some large fires reported, burn bans advertised, critical conditions expected 					
Red	Rare — Once every 1-5 Years Safety: Extensive Property Damage Likely, Life Saving Actions Also will be Needed Impact Potential: Will likely result in Large Disruption to Daily Life	Severe: Moderate Risk from SPC Flooding: Moderate flooding expected over a widespread area (including urban locations) Tropical: A Hurricane expected to move towards or near any coastline Fire: Large areas of critical conditions for 2 or more days, Warnings for 3 or more days, Severe to extreme drought	 A Category 1 hurricane will be moving towards the NW Gulf in the next few days Widespread severe storms likely, strong tornadoes, widespread wind damage, and destructive hail Large fires ongoing throughout the area with critical fire weather conditions expected to continue 					
Purple	Very Rare – Once Every 5-10 Years Safety: Property Damage Unavoidable, Immediate Action to Save Life will be Needed Impact Potential: Typically Results in Long-Lived Widespread Major Disruption to Daily Life	Severe: High Risk from SPC Flooding: Major flooding expected over a widespread area (including urban locations) Tropical: A Major Hurricane (Cat3 or greater) expected to move towards or near any coastline Fire: Large area of critical conditions for 2 or more days, Warnings for 3 or more days, Long term (months) of severe to extreme drought	 A Category 4 hurricane is headed towards the SE LA; major storm surge, flooding and damaging winds anticipated to begin tomorrow Widespread severe storms expected, tornado outbreak probable with long-lived, very widespread and particularly intense storms 					

Criteria for the color codes in this briefing is to the left, please provide any feedback to
